Figure 6.13   Complete sequence diagram for the 'Issue bike' scenario without returns

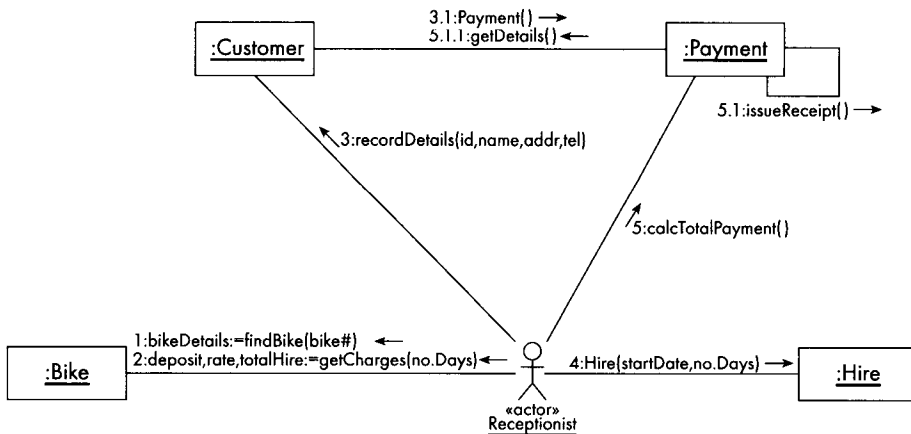

Figure 6.14   Collaboration diagram for the 'Issue bike' scenario

- Unlike sequence diagrams, returns are never modelled in a collaboration diagram

- In Figure 6.14, the message issueReceipt() is a reflexive message, i.e. a message from :Payment to itself. A link is modelled from :Payment to itself and the message goes along the link. On the sequence diagram this is shown as a nested activation.
